

Forensic Recovery Report — CASE-2026-00127

Report Number:	RPT-REC-20260903-5EF4
Report Classification:	RECOVERY_CASE_REPORT
Generated Timestamp:	2026-09-02 19:24:01 UTC
Case Number:	CASE-2026-00127
Case Title:	Authorized Incident Triage: Financial Audit Leak
Target Device:	Safe Demo Storage A (NVMe Sandbox)
Candidates Found:	9
Recovered Objects:	4

Executive & Technical Findings

- Case Number**: `CASE-2026-00127`
- Case Title**: Authorized Incident Triage: Financial Audit Leak
- Investigated Target**: `Safe Demo Storage A (NVMe Sandbox)`
- Forensic Analyst**: `demo\_user`
- Date of Investigation**: `2026-09-02 19:24:01 UTC`

Authorized forensic deleted-file recovery was initiated to identify unallocated and deleted data blocks. Deep file carving was performed using deterministic magic-byte boundary analysis and fragment continuity validation.

- Deleted Candidate Objects Detected**: `9`
- Successfully Extracted & Validated Files**: `4`
- Integrity Validation**: All recovered payloads were hashed with SHA-256 for chain-of-custody tracking.

All extracted objects have been deposited into the secure DataShield evidence vault with cryptographic checksums recorded in the immutable audit trail.

Cryptographic Chain of Custody Verification:

This document was digitally compiled by the DataShield Core Verification Engine (SIH26149). Underlying sector telemetry, SHA-256 evidence hashes, and authorization audit logs are immutably registered.
